PROJECTS

NGO for Students and Volunteers
Full Stack Development   2024

- Developed a web-based platform to revolutionize the educational landscape for underprivileged students
- Led a team in the full-stack development of the platform, ensuring high performance and collaboration to meet project goals.
- Implemented gamification techniques to motivate volunteers and enhance user engagement on the platform.

Detection of DeepFake Images and Audio
Machine Learning   2024

- Developed a machine learning model to detect DeepFake images and audio, contributing to the fight against misinformation and fake content online.

Vegetable and Fruit Detetction
Machine Learning   2024

- Developed a machine learning model to detect and classify vegetables and fruits, enhancing food recognition technology.
- Implemented image processing techniques and trained the model on a dataset to achieve accurate detection results.

Car Parking Management System
Python (Frontend) and MySQL (Backend)   2023

- Developed a user-friendly frontend for a Car Parking Management System using Python, ensuring seamless interaction and intuitive design.
- Designed and implemented a robust backend using MySQL, enabling efficient data management and retrieval for the system.
- Collaborated with team members to integrate frontend and backend components, ensuring smooth functionality and overall system reliability.
